Plant Height: 6 inches

Flower Height: 8 inches

Spread: 14 inches

Sunlight:

Hardiness Zone: (annual)

Group/Class: Scopia Series

Description:

Large early blooming, double white flowers in snow white blanket this semi-trailing variety, creating a stunning look in hanging baskets and patio containers; deadhead to encourage new blooms throughout the season; easy to grow and low maintenance

Ornamental Features

Scopia Double Snowball Bacopa is covered in stunning double white star-shaped flowers along the stems from mid spring to late fall. Its small serrated round leaves remain green in colour throughout the year.

Landscape Attributes

Scopia Double Snowball Bacopa is an herbaceous annual with a trailing habit of growth, eventually spilling over the edges of hanging baskets and containers. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This plant will require occasional maintenance and upkeep, and should not require much pruning, except when necessary, such as to remove dieback. It has no significant negative characteristics.

Scopia Double Snowball Bacopa is recommended for the following landscape applications;

- Mass Planting
- Border Edging
- General Garden Use
- Groundcover
- Container Planting
- Hanging Baskets

Planting & Growing

Scopia Double Snowball Bacopa will grow to be only 6 inches tall at maturity extending to 8 inches tall with the flowers, with a spread of 14 inches. Its foliage tends to remain low and dense right to the ground. Although it's not a true annual, this fast-growing plant can be expected to behave as an annual in our climate if left outdoors over the winter, usually needing replacement the following year. As such, gardeners should take into consideration that it will perform differently than it would in its native habitat.

This plant should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. This plant should not require much in the way of fertilizing once established, although it may appreciate a shot of general-purpose fertilizer from time to time early in the growing season. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America. It can be propagated by cuttings; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Scopia Double Snowball Bacopa is a fine choice for the garden, but it is also a good selection for planting in outdoor containers and hanging baskets. Because of its trailing habit of growth, it is ideally suited for use as a 'spiller' in the 'spiller-thriller-filler' container combination; plant it near the edges where it can spill gracefully over the pot. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
